School of Public Health
Center for the Advancement of Distance Education

The Changing Face of Continuing Education and Training

The line between continuing education and for-credit (college-based) education is becoming blurred as colleges and universities search for sources of income.

We are beginning to see “everyone” (e.g., even Universities that didn’t give it much credit) enter the continuing education arena AND pay it some attention.

Because colleges and universities are increasing their production of CE courses they are becoming more accessible/relevant to the workforce.

The Changing Face of Continuing Education and Training

Competency development related to fields and job roles became critical when bioterrorism preparedness became a national issue...followed by a lot of funding.

Public Health Ready (NACCHO)

- Criteria for LHD Certification
 - Workers Prepared
 - Agency Plan (including training plan)
 - Exercises (After Action Plan informs training plan)
- 12 Pilot Sites IN 2003
 - One in Illinois (Winnebago County/Rockford)
 - 7 pilot sites using UIC online assessment
- Great expansion to whole states in 2004-05

National Impetus in Public Health

CDC Cooperative Agreement on Public Health Preparedness and Response for Bioterrorism

Focus Area G: Education and Training

“To ensure the delivery of appropriate education and training to key public health professionals.....”

“Implement a learning management system capable of collecting and reporting data on all training and educational activities as well as sharing “best practices” with other public health agencies. “

National Impetus in Public Health

Bottom line

Every State health department must have a learning management system.

Learning Management Systems (LMS)

What is a LMS?

- Provides education to public health workforce related to their **roles** and needs
- Promotes worker **competencies**
- Associates competencies to worker roles
- **Assesses workers** and competencies related to roles
- **Recommends appropriate courses** based on assessments
- Stores **competency progress** and **course history** for each learner

Learning Management Systems (LMS)

Roles? (those recommended by Columbia U.)

- Public Health Leaders
- Public Health Clinical Staff
- Public Health Communicable Disease Staff
- Environmental Health Staff
- Public Health Laboratory Staff
- Medical Examiner/Coroner
- Public Health Information Staff
- Other Public Health Professional Staff
- Public Health Technical and Support Staff

Learning Management Systems (LMS)

Competencies? (example in epidemiology)

- Describe applied epidemiology, including its unique and important features, to general audiences.
- Apply and interpret commonly used measures of frequency.
- Apply and interpret measures of central location and dispersion.
- Organize and present epidemiological data to various audiences.
- Describe the purposes and important features of public health surveillance.
- Participate in the various steps involved with investigating an outbreak.

Learning Management Systems (LMS)

Sources of Competencies

- Bioterrorism Preparedness

Features of a Learning Management System

- combination of **web-based software applications** in which **learning content is delivered and managed**
- addresses **online and offline training, administration and performance management**
- includes functionality for **course catalogs, launching courses, registering students, tracking student progress and assessments, and creating reports**
- has a **front-end for the learner** and a **back-end for administrators and instructors**

Features of a Learning Management System

- allows for competency-driven assessment and course associations
- integrates online quizzing and evaluation processes, permitting accurate, automated measurement and reporting.
- permits centralized course and learner administration to better meet agency objectives
- designed, developed, and customized specifically for public health learners

Learning Management Systems (LMS)

How are LMS's used by State and local health practitioners?

- meet grant requirements (e.g., CDC Focus Area G in bioterrorism preparedness)
- track overall workforce assessment, training and certification
- track training provided by contractors
- allow local health departments to manage their own staff training
- Allow the development of a training plan (required by some funding initiatives)

Using competencies as measures of worker and workforce preparedness

- State public health level
 - Demonstrates workforce preparedness to the state government, public, media, and external funding sources (CDC)
 - Document local and statewide PH preparedness in measurable terms
- Local public health level
 - Demonstrates preparedness to Board of Health, local government, public, media, grant providers
 - Quantifiable and meaningful reports to State for statewide preparedness
 - Establishes a professional career pathway for public health personnel

Learning Management Systems

All of this information can help State and Local Health Departments develop a training plans

- Identify competency needs, courses taken, competencies achieved by:
 - Local health departments/individual workers
 - Geography (County or Public health regions)
 - Public health roles
- Identify new training courses needed

Approaches for Recognizing Competency

- Certificate Programs (based on completing several courses)
- Continuing Education Units (e.g., CNE, CME, etc.)
- Independent Credentialing Bodies (using same competency framework)
 - Public Health Administrators
 - Emergency Response Coordinators
 - Public Health Ready (NACCHO)

Public Health Practitioner Certification Board (www.phpcb.org)

- Independent, not-for-profit entity established by IPHA, IPHAA, IABOH
- 6 Board Members plus non-voting state liaisons (IL, MO, KS, ...) representing states participating in the process
- IDPH requested that the Certification Board develop a similar program to certify emergency response coordinators (2003)

Certified Emergency Response Coordinator Application

- Online application
- Applicant provides basic identifying information and evidence of having demonstrated or attained each competency in the 8 categories (total competencies = 54)
 - Evidence can be derived from education and training OR from work experiences
 - Designated attestors also submit information online

<http://www.phpcb.org/>

Mission

As part of its commitment to building a workforce recognized for its competency, the Public Health Practitioner Certification Board (PHPCB) was originally established to certify public health administrators. This mission has been expanded to offer competency-based certification to emergency response coordinators, and to consider further development of competency-based credentialing for other occupational categories within the public health workforce.

Certification

There is a need to recognize competency in public health practice through credentialing and certification programs that will assist state agencies, local boards of health, and other entities in recruiting, hiring and promoting competent local health professionals. In addition to promoting a competent public health workforce, certification serves to foster professional advancement of public health workers by increasing career opportunities. [Top](#)

Public health is in a period of major transition in which it has an opportunity to lead a revolution in the organization and delivery of health care throughout the world. It will accomplish this only if it can demonstrate that its practitioners have the knowledge and skills necessary to carry out the arduous tasks that lay ahead. Credentialing is a vital ingredient in the process of providing this assurance.

Mohammed N. Akhter, MD, MPH
Former Executive Director
American Public Health Association

What is Certification?

Certification is recognition by the Public Health Practitioner Certification Board that an individual has acquired and demonstrated the important competencies associated with the essential requirements of a professional category within the public health workforce.

A person seeking certification as a public health administrator is expected to provide evidence that they have acquired and demonstrated competency in public health practice and public health administration. Once certified, the individual may use the initials CPHA (Certified Public Health Administrator) after their name.

Certification of emergency response coordinators is based on evidence submitted by individuals that have acquired and demonstrated competency in public health practice, public health emergency preparedness and response, environmental health, epidemiology and infectious diseases. The

Experiential Evidence

View Competency Through Experience Forms:

Steps To Document Experiential Evidence

The documentation verifying your competency-based experience should be completed by attester(s) (people who can attest to your competencies). The application requires that you do the following:

1. You should contact your attesters to ask them a) if they will attest to your competency-based experience and b) whether they would prefer to complete the forms with or without specific examples provided by you.
2. For each attester, click "Add Attester" and complete the information form.
3. If the attester wants specific examples provided by you, then pre-fill the forms (by clicking "Pre-fill") before you send them to the attester. (The attester may accept, edit and/or add examples of your experience).
4. When you are ready to send the forms to the attester, click "Send Email." You may add a personal message at this point.
5. Once the attester has completed and submitted the forms for one or more competency area, it will be marked on your website as complete. At this point, you may click on the competency area to view the completed attester form. You cannot edit this.
6. You have the option to include an attester's completed forms in your application for review. You may delete the attester and their evidence completely by clicking "Delete."
7. If the attester has not submitted the requested forms, please contact them via the "Send Email" button.

- Environmental Health
- Applied Epidemiology
- Infectious Disease Preparedness & Response

Certification

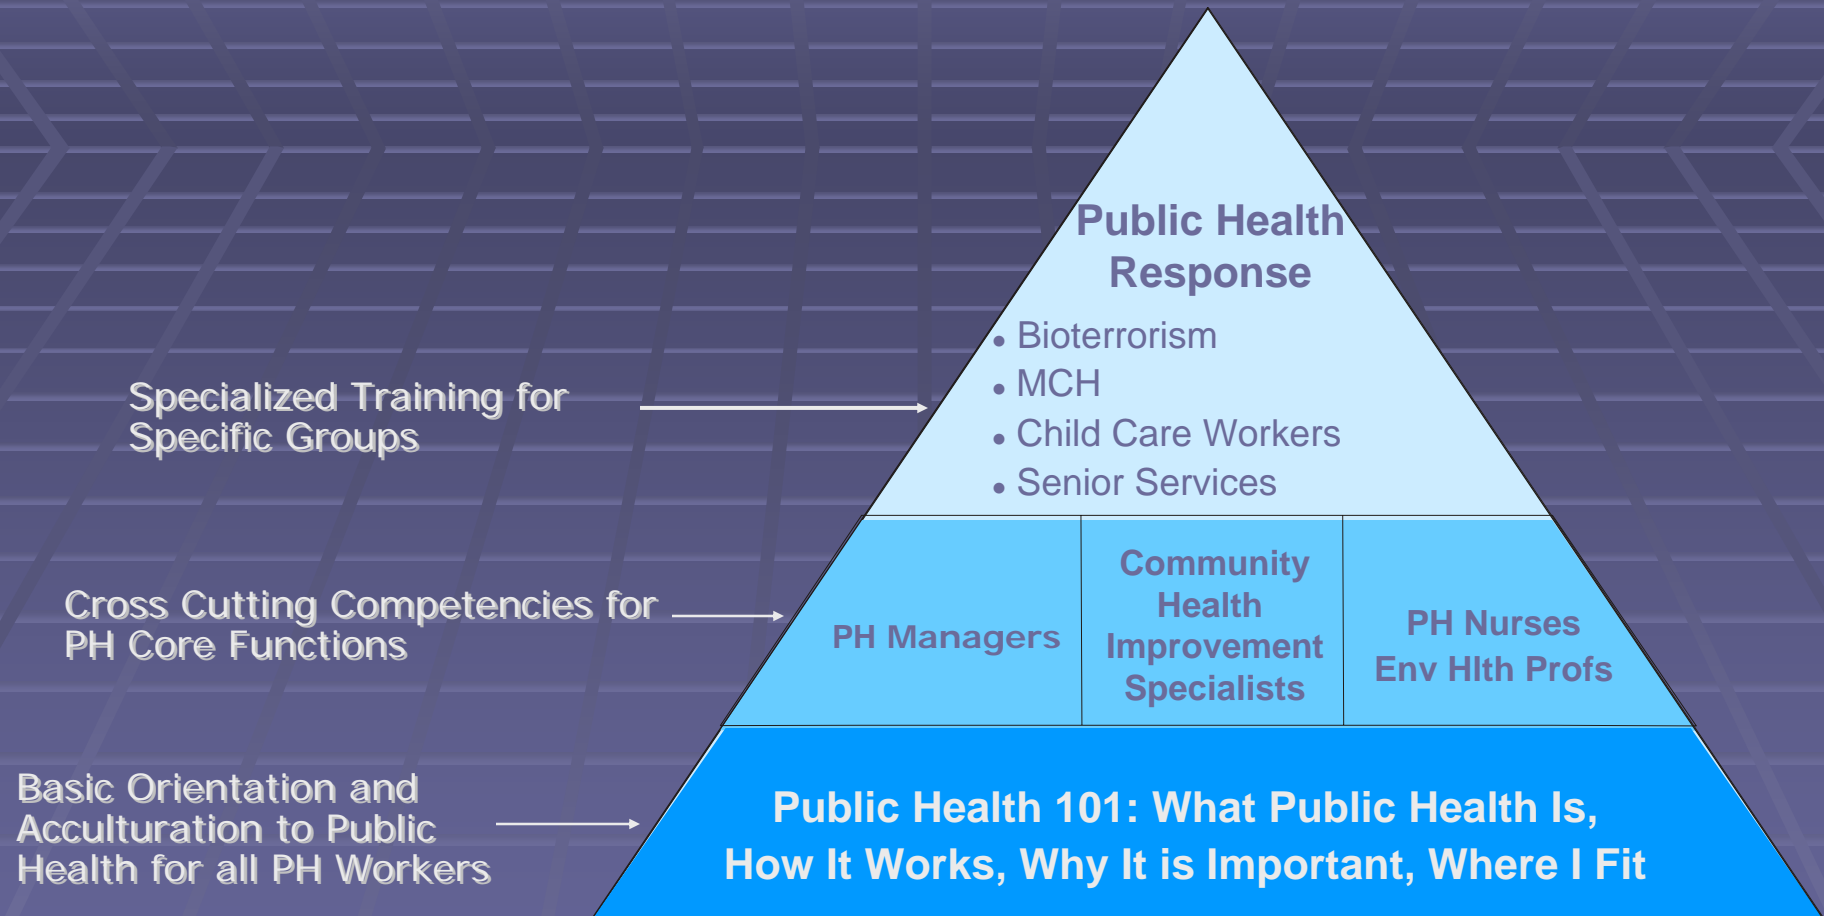

Early Lessons – Implications

- Systems need time and sustained support
- Preparedness is largely local
- Federal leadership is essential
- Resource commitments for 5 or more years needed
- Current efforts are federal/state centric
- Operationalize and expect preparedness; coordinate with HRSA, DHS, and other Federal Agencies

Strategic Elements for Public Health Workforce Development

Public Health Training Pyramid

LMS & Public Health Workforce Development

- 1 – Assess Competency Using Consistent Methods and Tools.
- 2 – Enhance Specific Competencies Based on Assessment.
- 3 – Verify Competent Performance in Workplace via HR Management.
- 4 – Recognize Competent Performance via System Incentives

Illinois Department of Public Health Assessment Report

<u>Local Health Department Name</u> ▲	<u>Number Of Workers</u>	<u>Registered in LMS</u>	<u>Workers Assessed</u>	<u>% Complete (Registered)</u>	<u>% Complete (All)</u>
Adams County Health Department	51	51	51	100.00%	100.00%
Bond County Health Department	11	11	10	90.91%	90.91%
Boone County Health Department	17	16	16	100.00%	94.12%
Brown County Health Department	6	6	6	100.00%	100.00%
Bureau County Health Department	25	19	19	100.00%	76.00%
Calhoun County Health Department	12	12	10	83.33%	83.33%

First Challenge

- How do you get 6000 people?
- That are not part of your organization
- Local Health Departments
- Accountable

Answer:

- Locals have certain admin access to the Learning System
- Add/Modify/Delete public health workers
- Run Reports On people missing their assessment
- State gets total numbers
- CDC gets accurate report!

Second Challenge

- Integrate with current Learning Tools (Blackboard, WebCT, LearningSpace)
- Same Credentials between the LMS and Blackboard/WebCT)
- Synchronous Registration
- Single Sign-On

Answer

- Web Service (BlackBoard/WebCT)
- IMS Global Learning Consortium (<http://www.imsglobal.org/>)
- XML Standard
- Send Registrants
- LMS System Credential authority

Third Challenge

- LDAP Integration
- Single directory
- IDPH Integration

Answer:

- LDAP integration is best when is already established
- Late-bound LDAP Integration still possible, provided that you plan for it.
- Plan your LDAP Integrations

Current Innovations

- “Cross-Posting” Course?
 - Will Create new Credentials
 - Cannot track course automatically
 - Competencies addressed will not be identified
